0747.048.019

Our jobs involve developing, maintaining and integrating state of the art, mission critical solutions for core insurance and record keeping systems, in an international context for a leading European Insurance Group.

You will work as part of a multinational group with true, large, enterprise-wide systems, complex architecture, and real-life constraints (speed, performance, non-stop systems availability and enhanced security and data protection).

### Job brief

You are going to be part of a young and fun cross-functional team which designs and implements enterprise level integration solutions to connect our interaction and third-party systems to our core IT landscape. You will work in the biggest software development program in Europe called UIP (UNIQA Insurance Platform).

### Main responsibilities

- Develop integration services using Flow and Java languages on the webMethods platform
- Design and implement SOAP and REST based APIs
- Secure applications against hacking attacks and data theft
- Perform application maintenance (implement change requests, fix bugs)
- Perform peer programming and review
- Prepare and monitor deployments to other stages (test, pre-production, production)
- Write Unit and Integration tests
- Adopt and support best practices within the technology domain
- Communicate with vendor's R&D department in case of webMethods platform defects.

### Required skills

- Good knowledge of OOP and Java concepts
- At least 2 years of practical experience in J2EE development
- Knowledge of the following protocols and architectural styles: HTTP, SOAP and REST
- Knowledge of specification languages: WSDL (for SOAP), Swagger, Open API (for REST)
- Knowledge of web security services concepts

- Ability to use XSD, XML, XSLT/XPath and JSON
- Experience using testing tools: SoapUI, Postman, etc.
- Experience in writing and maintaining Unit and Integration tests
- Experience with Version Control Systems (CVS, git)
- CI/CD knowledge (Jenkins, UrbanCode, etc.)
- Experience with Industry Standards like BiPro / CMIS / SCIM
- Understanding of canonical data models
- Knowledge of Integration design patterns
- Strong social skills, good communicator both orally and in written form
- Effective team player in a corporate environment
- Fluent in English (both spoken and written).

### **Desirable skills** (nice to have)

- Experience with the webMethods Suite
- Strong interest in clean design and architecture of large-scale software systems
- Experience with integration projects
- Experience in designing and developing APIs
- Experience in implementing file transfer solutions
- Experience in building messaging-based integrations
- Knowledge of the Insurance domain
- German language skills.

### **Compensation & benefits**

- Very stable work environment, as part of a large Insurance Multinational Group
- Flexible work program, respecting your own private time
- Full-time, unlimited employment contract
- Attractive remuneration package
- Lunch tickets
- Private pension and health insurance
- Extra vacation days
- Exchange of experience and training with international professionals, as a premise for personal development
- Career development opportunities
- German language courses
- Contribution to sport activities
- Team building events
- Great workplace, central office location in a green and quiet area, great city views etc.
